John Endicott, Ph.D., The AECOM Asia Fellow

**The urban surface is
already the engine room
of the city.**

**It could also hold the
key to the future
liveability and resilience
of our cities.**

This book explores how new ideas and technologies can help to make our increasingly dense, climate-stressed cities both more resilient and more of a pleasure to live in.

The book looks at two pioneering cold-climate cities, Montreal and Helsinki, which developed new uses for the underground from the 1960's on. Focusing on Hong Kong, Singapore, and Tokyo, it shows projects that are going deeper, achieving a greater synergy of uses, and paving the way for new urban forms. In between, the review of innovative ideas extends from logistics to pneumatic technologies,
